

✓ MCQs – Swarm, OpenAI Agents SDK & Design Patterns (Total: 30)

1. Swarm framework ka main purpose kya tha?

- a) Image editing
- b) Multi-agent systems ka orchestration
- c) Database indexing
- d) UI design

Answer: b

☞ Swarm ka maksad tha ke multiple AI agents mil kar ek complex task solve kar saken.

2. Swarm ke design ko kis tarah describe kiya gaya hai?

- a) Heavyweight and rigid
- b) Ergonomic and lightweight
- c) Graphical and complex
- d) Old-fashioned

Answer: b

☞ Swarm asaani aur flexibility ke sath multi-agent coordination allow karta hai.

3. Swarm ka core concept kya hai?

- a) Single-agent model
- b) Decentralized memory
- c) Agents and Handoffs
- d) Hardware processing

Answer: c

☞ *Agents ka kaam divide hota hai, aur handoffs se control transfer hota hai.*

4. Agent kis cheez ko represent karta hai?

- a) Database schema
- b) Standalone ML model
- c) Ek choti AI entity jo specific task perform karti hai
- d) Backup service

Answer: c

5. Handoff kya hota hai?

- a) Control ka ek agent se doosre agent ko transfer
- b) File ka export
- c) Model update
- d) Database replication

Answer: a

6. OpenAI Agents SDK ka relation Swarm se kya hai?

- a) Bilkul alag concept hai
- b) Swarm ka GUI version hai
- c) Swarm ka upgraded production version hai
- d) Swarm ka legacy tool hai

Answer: c

7. Agents SDK kis cheez ko improve karta hai?

- a) Video rendering
- b) Multi-agent orchestration and performance
- c) Hardware communication
- d) Data encryption

Answer: b

8. Prompt chaining ka basic idea kya hai?

- a) Parallel processing
- b) Complex task ko chhote manageable steps mein divide karna
- c) File management
- d) Prompt randomize karna

Answer: b

9. Routing ka design pattern kya achieve karta hai?

- a) Random response
- b) Jo agent best suit kare, us tak task pohchaana
- c) Memory optimization
- d) Logging

Answer: b

10. Parallelization ka kya faida hota hai?

- a) System slowdown
- b) Multiple agents simultaneously kaam karte hain
- c) Handoff remove hota hai
- d) Error generation kam hoti hai

Answer: b

11. Orchestrator agent ka kya role hota hai?

- a) Task ko khud hi perform karna
- b) Subtasks divide karna aur assign karna
- c) Database monitor karna
- d) API call karna

Answer: b

12. Worker agents kya karte hain?

- a) Plan banate hain
- b) Subtasks ko execute karte hain
- c) Evaluation karte hain
- d) Logging karte hain

Answer: b

13. Evaluator agent ka kaam kya hai?

- a) Output evaluate karna aur improvement suggest karna
- b) Network monitor karna
- c) Hardware check karna
- d) Logs store karna

Answer: a

14. Optimizer kaun hota hai?

- a) Jo agent models compress karta hai
- b) Jo evaluator se feedback le kar agents ko improve karta hai
- c) GPU allocator
- d) Model deployer

Answer: b

15. Swarm design ka benefit kya hai?

- a) Memory heavy
- b) Testable aur scalable
- c) Only UI focused
- d) Static AI system

Answer: b

16. SDK kaun si built-in features provide karta hai?

- a) Parallelism
- b) Evaluation
- c) Handoff routing
- d) All of the above

Answer: d

17. Real-world mein Swarm kis jagah use ho sakta hai?

- a) Video gaming
- b) Customer service automation
- c) RAM testing
- d) OCR

Answer: b

18. Billing ke liye kaunsa agent appropriate hai?

- a) Cart Agent
- b) General Info Agent
- c) Billing Agent

d) Recommendation Agent

Answer: c

19. Agar ek agent unable ho, system kya karega?

- a) Task fail karega
- b) Backup lelega
- c) Handoff karega next qualified agent ko
- d) System halt karega

Answer: c

20. Agents SDK kin design patterns ko follow karta hai?

- a) MVC
- b) Anthropic Patterns
- c) MVVM
- d) BERT Architecture

Answer: b

21. Swarm ka behavior kis pe depend karta hai?

- a) Hardware
- b) Agent configuration and interaction
- c) Language model size
- d) Voice commands

Answer: b

22. Ek agent ka task kis base pe assign hota hai?

- a) Random selection
- b) Training data
- c) Specialization aur routing logic
- d) Cache timing

Answer: c

23. Evaluator kis tarah optimization improve karta hai?

- a) Random changes
- b) Performance feedback aur suggestions se
- c) Restart system
- d) Model fine-tuning se

Answer: b

24. SDK ka orchestration ka matlab kya hota hai?

- a) Agents ko sequence mein run karna aur coordinate karna
- b) Audio track control
- c) Frontend animation
- d) Video transitions

Answer: a

25. Feedback system kahan use ho sakta hai?

- a) Order complete hone ke baad customer feedback lena
- b) Video editing
- c) Device testing
- d) Model compression

Answer: a

26. Agents SDK ka integration kaise hota hai?

- a) Manually
- b) GUI tool se
- c) Python code aur configs ke zariye
- d) Only JavaScript

Answer: c

27. Swarm ka lightweight hona kya allow karta hai?

- a) Faster memory read
- b) Easy experimentation aur scaling
- c) Less RAM usage
- d) Compression

Answer: b

28. Parallel agents deploy karna kis cheez ke liye helpful hai?

- a) Sequential processing
- b) System slowdown
- c) Faster output with divided tasks
- d) Logging only

Answer: c

29. SDK ka handoff system ka benefit kya hai?

- a) Randomize kar deta hai agents ko
- b) Best agent ko task assign karta hai
- c) Logs delete karta hai
- d) Memory optimize karta hai

Answer: b

30. Agent failure ke case mein system kya karega ideally?

- a) Stop
- b) Retry same agent
- c) Reroute via handoff to next agent
- d) Notify admin

Answer: c
